Summary

Subject of the thesis: Trends in the world agricultural development

Author: Eldar Akhmetov

Academic Advisor: Romanko L.V, C.E.S., assistant professor

Organization: School of International Relations, Chair of International Relations, World Economy and International Law, Pyatigorsk State University.

Relevance of the research issue: In the context of deepening Russia's integration into the world economy and joining the WTO, the problem of the functioning of Russia's agriculture in a new environment of international coordination of economic policy is becoming especially urgent and requires finding solutions. The contradictoriness of scientific assessments of the influence of the agrarian sector on the social and economic development of the countries of the world, as well as the insufficiently developed theoretical and methodical aspects of adapting the mechanism of state support to agriculture to the conditions for multilateral regulation of world agricultural markets, predetermined the choice of the topic and the relevance of our study.

The purpose of the study is to study the functioning of world agriculture and analyze the impact of various factors on the prospects for its further development.

Research objectives:
- consider the evolution of theoretical ideas about the place of agriculture in the economic system;
- define industry features and consider MRI processes in the field of agriculture;
- to study the basic mechanisms for stimulating the development of world agriculture;
- consider the current stage of development of world agriculture;
- define the main trends of the world agrarian sector in the post-industrial economy;
- Explore prospects for the development of the agricultural sector in Russia in the context of the economic crisis and accession to the WTO.

The scientific novelty of the study is a comprehensive analysis of the trends in the development of world agriculture and the study of areas of possible overcoming of the problems characteristic of world agriculture.

Structure of the final qualifying work Is conditioned by the purpose, tasks and internal logic of the problem under investigation and includes an introduction, two chapters, three paragraphs each, a conclusion, a bibliography of the literature used, including 83 sources, including 20 in foreign languages, of the annexes. The total amount of work is 78 pages of typewritten text.

Annotation: Based on the experience of leading developed and developing countries on reforming the state agrarian policy in accordance with the rules of multilateral regulation of world agricultural markets and taking into account the specifics of the mechanism of state support for agriculture developed in the Russian Federation, possible directions for its adjustment were formulated in
accordance with the commitments to the WTO. Russia's agriculture, having touched the bottom of the crisis in the 1990s, has been in a state of gradual revival since 2001, which contributes to Russia's leadership as a serious global economic player - a supplier of world-wide food. And while Russia faces international competition from the modern agribusiness of the US, Canada, EU, Australia, the entry of the Russian economy into the WTO and the strengthening of the Customs Union of Russia, Belarus and Kazakhstan creates additional competitive challenges and advantages for Russian agriculture.
