Author: Dugarova Aminat Musaevna

Academic Adviser: Romanko L.V. Assistant Professor, PhD, Economic Sciences

Organization: School of International Relations, Chair of International Relations, World Economy and International Law, Pyatigorsk State University.

Relevance of the research issue: The problem of qualitative economic growth of any country becomes extremely important. Today the status of the energy industry is one of the most important indicators of the development of a modern state, a region and the world, because the consumption of all energy resources continues to grow, and the destabilization of prices on the energy market greatly affects the security and sustainable development not only in the world economy, but in every state.

The purpose of the study is to develop theoretical principles that can reveal the peculiarities of functioning of the fuel and energy complex of the Russian Federation, as well as the development of recommendations for improving the strategy for the development of this complex in Russia.

Research objectives:

- define the concept, the nature of the FEC and the main aspects of its development in contemporary conditions;
- identify the place and role of Russia in the global energy market;
- assess the impact of the global economic and political processes on the of Russian fuel and energy complex;
- describe the conditions of functioning of the fuel and energy complex of Russia in the global energy market;
- identify the potential and directions for development of fuel and energy complex of Russia.

The scientific novelty: On the basis of quantitative and qualitative observations and the detailed analysis of the impact of the global economic processes on the development of the fuel and energy complex of Russia, measures to improve the efficiency and stability of the Russian fuel and energy complex are worked out.

The structure of the work consists of an introduction, two chapters, 6 paragraphs, conclusion, a 117-reference bibliography (15 of them are in foreign languages) and applications. The total volume is 76 pages.

Summary: In the context of today's crisis and the increasing threats to economic security from the global commodity markets on various components of economic development in the country there is always increasing socio-political tensions that also affect the providing of the economic security of the state. The formation of the strategy for oil and gas companies both internal and external threats should be taken into consideration. They could have a destabilizing influence on the commercial activities of the companies and on the economy of a country.
