

SUMMARY

Subject of the thesis: Interaction between Russia and Turkey in the field of energy policy.

Author: Zaurbek Kazanokov.

Academic Adviser: Adamova M. A., Doctor of Political Science.

Organization: School of International Relations, Chair of International Relations, World Economy and International Law, Pyatigorsk State Linguistic University.

Relevance of the research issue: Currently, access to energy resources is the basis of the daily life of the modern man, so that the energy factor in world politics plays a lesser role than the military. Under the influence of energy interests formed state strategy and foreign policy of the country. However, the current level of technology does not allow humanity to fully overcome the dependence on fossil fuels. Limitations of hydrocarbon reserves and ever-increasing demand for developed and developing countries for energy resources exacerbate the issue of energy security of the world and lead to a struggle for control over energy resources and their transportation. In this situation, all participants pursue their own energy interests, and energy problems are reflected in international relations, including relations between Russia and Turkey.

Also, today there is a conflict of interest in relations between Russia and Turkey. This conflict deserves special consideration, as it affects the problem of energy. This primarily relates to the transit of Caspian energy resources to the world markets. However, there is also formed a valuable experience of cooperation in the field of energy policy - one of the regulators of international stability.

The purpose is to analyze the relationship between Russia and Turkey, and its impact on political stability in the region.

Research objectives:

-learn the basics of energy policy: basic concepts, stages of evolution, mechanisms of formation and implementation.

-analyze the objective conditions for the development of Russia and Turkey in the field of the energy policy.

-describe the role and place of energy cooperation of Turkish-Russian relations.

-investigate the interaction between Turkey and Russia in the energy sector and its impact on regional stability.

Scientific novelty is in the fact that the work presents a comprehensive characterization of the modern system of energy relationship between Russia and Turkey.

Structure: the research consists of an introduction, two chapters, two paragraphs in each chapter, conclusion, bibliography, which includes 42 sources, including 10 on foreign languages. Total amount of work is 83 pages of typescript.

Summary: Energy policy in recent decades has become essential for the formation of both domestic and foreign policy of Russia. Accordingly, the study of relations in the sphere of energy policy between such energy exporting countries

like Russia and Turkey seem necessary and relevant. Russia and Turkey are the major political and economic players in the Black Sea-Caspian region, and the global energy market. A detailed study of this issue allows to develop relevant policies in the field of energy cooperation in the region.

It is also important to note that the development of bilateral cooperation in the energy sector will be influenced by third parties and especially the West. Influence of third forces and his character will be determined not only by the development of relations with Russia, but also in the whole course of Turkey for the acquisition in the process of globalization a strong regional power status
