

SUMMARY

of the final qualifying work

The topic of the final qualifying work: The foreign trade development of the region and inclusion of local enterprises into the system of the international division of labor (Stavropol Region)

The author of the final qualifying work: Shakhbazyan Garik Vladislavovich

The scientific advisor: Candidate of Economical Science, Assistant Professor Kasaeva T.V.

Organization: Pyatigorsk State University, Institute of International Relations, Department of International Relations, Political Science and World Economy.

The relevance of the research topic: is determined by the important role of international trade as one of the oldest forms of international economic relations during the world economy development. The world market condition affects directly the development of sector of national economic activity. The degree of involvement in the world economic relations, the commodity structure of the foreign trade of the region determines its place in the system of the international division of labor. Simultaneously, foreign trade relations greatly influence the structure of the economy of the country and its regions. The development of regional regulation of the foreign trade acquires important significance, which allows taking into account the peculiarities of each region in the context of great economical differentiation of the constituent entities in the Russian Federation. The main goal of such regulation should be the desire to minimize destructive influences and maximize the potential of foreign trade in the development of the regional economy. The development of measures to include new enterprises in priority sectors in the system of the international division of labor becomes particularly relevant with this background and in the context of identifying perspective areas for the development of the region's foreign trade.

The objective of the final qualifying work: the processes of regional foreign trade's development as part of the national economy which is integrated into the system of the international division of labor are the objectives of this research.

The subject of the final qualifying work: the economic relations created in the process of including the region in general and individual enterprises located on its territory into the system of the international division of labor are the main subjects of this research.

The goal of the study: is to determine the development tendencies of the region's foreign trade and design measures for their implementation in the context of international trade development trends.

Achieving this goal implies the solution of the following tasks:

- to overview the evolution of theories of the international division of labor;

- to study the development of world trade at the present stage;
- to analyze the trends and development problems of foreign trade in the Russian Federation;
- to study the features of the foreign trade development as a reflection of the industry- specific structure of the economy in the Stavropol region;
- to develop measures for regional support and export development in the context of the main trends of the foreign trade intensification in the Stavropol region.

Theoretical and practical significance of the research: the analysis of foreign trade in the Stavropol region and the conclusions which have been made during the research are of theoretical importance and can be used in further scientific research of this issue. The obtained research materials can be used in the revision and lecturing courses in such disciplines as "World Economy", "Geoeconomics" and etc.

The practical approval of research results: the main ideas of the research have been presented at the following conferences: III International Scientific and Practical Conference "Issues and Problems of Economics and Management in the Modern World" (Omsk, 2016); "Young Science" (Pyatigorsk, 2017). The main points of the work are introduced in 2 scientific publications.

The scientific novelty of the study: is determined by its goal and objectives; it involves the analysis of the foreign trade in the Stavropol region and integrating enterprises into the system of the international division of labor.

The structure of the final qualifying work: it consists of an introduction, two chapters, including five paragraphs, conclusions, a list of used literature and applications. The total amount of pages is 70.

Summary:

The Stavropol region is a region which predominantly specializes on primary and raw in the system of the international division of labor. The commodity structure of its exports is significantly clustered. The "border effect" in foreign trade can be an explanation for this phenomenon, which makes difficult for many large enterprises to enter the foreign markets and as well as it complicates the establishment of the foreign trade contacts with new handling agents.

The conducted study of the foreign trade in the Stavropol region reveals the need of its commodity and geographical diversification. It is necessary to form a recognizable brand of the Stavropol region, under the guidance of which the Stavropol commodity producers would be presented on the international market in the context of the "new theory" of international trade and in order to increase the degree of the region's inclusion in the system of world economic relations. An analysis of the industrial structure and resource potential of the Stavropol region, as well as the trends of the international market, suggests that the region should be positioned as a region producing a diverse range of high-quality food products and providing a wide range of travel services.
