**Supervisor of the project:** N.V. Karatseva, Lecturer of the Chair of Theory and Practice of Translation and Interpretation.

**Information about the sponsor organization:** Pyatigorsk State Linguistic University; 9 Kalinin St., Pyatigorsk, Stavropolkrai.

Nowadays science and technology play a great role in the life of the society. English as a global language has become the most important language in the world and the majority of information, including the information in the sphere of science and technology comes in English. Therefore the role of interpreters is very important without any doubts.

Machine translation has become very popular recently, as it provides momentary translation and can be used by many people. In our research we have considered the main features of the scientific and technical style, analyzed the problems of machine translation.

The first chapter of this research is devoted to the analysis of the term «functional style» and to main features of scientific and technical style. Moreover, a considerable attention has been paid to scientific and technical style in English.

The second chapter of the research presents the analysis of the systems of machine translation, the peculiarities of machine translation and also the main features of scientific and technical texts machine translation.

The conclusion contains the basic results of the research performed.
