Faculty of English and Romance languages
Chair of the Experimental Linguistics and Intercultural Competence
Author: Shomakhova Aida Khachimovna
Main parts: Contents, Introduction, tree Chapters, Conclusion and Bibliography.
Keywords: Modality, Prosody, Intonation, phonetics, monologue.
Abstract: A study of experimental phonetic research leads to several conclusions regarding the organization of prosodic features of spontaneous monologues in different Phonostylistic conditions. The main findings are as follows: A) increase speech volume (increase performance by about one positive level); B) an increase in speed of delivery (performance variation within the same level) C) an increase in tonal characteristics (higher level of tonal start and end of phrases and rate of change of tone).
