Author: Shepilova Olga Nikolaevna

Main parts: Contents, Introduction, two Chapters, Conclusion, Bibliography.

Keywords: slang, social dialects, social groups, classification, function, word formation, borrowings, communication.

Abstract: The present paper is dedicated to the study of the computer slang in modern Russian and English languages, as one of the most interesting and fast developing and extending types of language. The research is aimed at revealing and analyzing concrete slang expressions and the comparison of their peculiarities in Russian and English languages. It also focuses on the processes and ways of formation of new words in the computer slang in these languages.

In Chapter I the concept «slang» is defined and describes as one of the most interesting and changeable parts of modern Russian and English languages.

Chapter II is devoted to the study the process of formation of new slang-words in modern Russian and English languages.

So, this research work enables us to make a conclusion that computer slang is one of the most rapid developing sublanguages. All in all, for people to achieve success in intercultural communication it is very important to know the basic knowledge of modern computer slang.
